EQUAL OPPOR TUNITY MODEL

all it takes is a new perspective

A new perspective

We can do it <u>completely</u> different: truly <u>sustainable</u> co-operation is possible.

With much bigger advantages for <u>all</u> involved, <u>in partnership:</u>

producer(groups), financiers, essential service providers and chain-end users .. together

The Equal Opportunity Model makes this possible as a result of 'thinking out of no box'.

Ultimately simple

EQUAL OPPOR TUNITY MODEL

all it takes is a new perspective

It already works, in practice.

Why we need a new model

Mainstreaming of sustainable & fair production and marketing practices, can only be realized if:

- The essential parties that create the intrinsic value of a product, can work together as partners
- and ALL relevant players can participate
- Mainstreaming is impossible under the current economic model

Simply because it is based on 'individual interest'.

Achieving mainstreaming requires a new model with common-interest as starting-point

The Equal Opportunity Model proves that mainstreaming sustainable & fair production is amazingly simple to achieve.

Current individual-interest model

- All parties work from <u>individual</u> <u>interest</u>: producergroups, traders, distributors, auctions, processors, transporters, industries, banks, financiers, etc.
- Most parties do not add value, merely costs
- Transparancy is undesirable
- mainstreaming and true mutual partnerships can impossibly exist.

We have been using the same 'self-interest' model for over 200 years and it has proven not to work properly. Why would it not be time for a new model?

Common interest: basis for new perspective

EOM + Common Interest enables:

- Producer(groups) + chain-end-distributors can now operate as true, effective partners
- Via a innovative method: <u>all</u> can participate
- And at the same time. In 1 or many projects
- Other essential parties: logistical-, bank-, insurance, communication, etc. as well
- <u>Partnership</u> forms the only basis for a fairer divide of ownership and profits.

The last decades we have been striving for a more humane and fair society: only we have been using the wrong model to get there

Result: a truly sustainable partnership, And higher value-add for all

Partnership: +stability, +sureties, +returns, +acces to capital

- To Project Partners & Chain End Users EOM secures product offset, provides supply chain surety, better product-price quality ratio, better margins
- Productionplanning, productoffset, QC, transport, communication, etc. becomes completely plannable at lower risks and better terms.
- CapitalPartners entertain a unprecedented risk-profile with above average returns that become known offhand.
- The interest-instrument becomes superfluous.

EOM creates operational, commercial and financial sureties, stability and humanity in business

Ecciperatie

Chain End Users

zoals:Albron,Plus,Bretail, Spar,etc...maar ookindustriën zoalsbijvoorbeeldAluchemie

Capital Partners

like impact investors, pension funds, etc.

Project Partners

i.e. E.O.Carbon & Biofuels, E.O.Spices-India

Impact partners

i.e. METTA standard, Logistic provider, insurance, etc.

1. AdoptionPartners & the Equal Opportunity Model

Example:supermarket-chains

- Become Coop member/co-owner in Chain End User Group
- Partner in 1 or multiple E.O.Projects via new type of agreement and obtain a new type of 'co-ownership' in projects
- do NOT make any investments in any project
- Secure supply chain as 'co-owners' in projects
- Put own demands to: product quality, packformats, labelling, consumer pricing, etc.
- 'fair price' on basis of open calculation (possible between partners)
- This way retailers become (co)producers of their own 'fair & sustainable products and brands, sold in own stores.
- Also share in profit of coop profits: 25%

ALL retailers at the same time can participate

2. CapitalPartners and the Equal Opportunity Model

Example: private investors / institutional investors

- Membership in CapitalPartner group, investing capital against EOC Value-Certificates
- Via EOM model & 'Chain End User group' role, projectoutputs become known offhand, cash flows become known at beginning of bookyear
- partnership with multiple parties, spreads risks, multiple projects over broad variety of market segments spread risks further. Default risc becomes as minimal as possible
- 25% profit share in coop profits, plus only group which obtains preferential dividend
- Closed ecosystem: interest instrument superfluous, maximum control, no outside influences ('new economy')

Common Interest provides a more powerfull and stable basis than the current financial system.

3. ProjectPartners and the Equal Opportunity Model

Example: 10.000 spice farmers in Kerala West-India

- membership of coop as ProjectPartner + setup of local JV entity under the EOCoop.
- produces-, supplies via EOM principles, transparant
- EOCoöperative takes care of logistics, pricing, product liability, payment, insurance, finance
- Coop invests in the JV organisation for processing, packing, etc.
 - Coop connects the Chain End Users to the Project Partner until entire capacity is partnered, Communicates between project- en other partners on price formation, delivery, quality, invoicing, payment, etc.
- ProjectPartners also share in coop profits for 15%

All production according to real demand

E.O.Cooperative Chain End Users zoals:Albron Plus, EPretail, Spar, etc... maar ookindustriën zoalsbijvoorbeeldAluchemie **Capital Partners** impact investors, pension funds, etc. **Project Partners** i.e. E.O.Carbon & Biofuels. **E.O.Spices-India**

4. ImpactPartners and the Equal Opportunity Model

Example: a Logistics company

- Membership in ImpactPartner Group
- Transparancy on costs
- Logistics services from projectpartner to adoptionpartner
- EOCoöperative:
 - certification, planning, documentation (B/Ls, etc.): direct digital in Integrated Supply Chain Finance System. Accesable to all partners in real-time.

Everything is plannable and controllable offhand: production, packaging, transport, delivery, payments, insurance, etc.

E.O.Cooperative

Chain End Users

zoals:Albron,Plus,EPretail, Spar,etc...maar ookindustriën zoalsbijvoorbeeldAluchemie

Capital Partners

impact investors, pension funds, etc.

Project Partners

i.e. E.O.Carbon & Biofuels, E.O.Spices-India

Impact partners

i.e. METTA standard, Logistic provider, insurance, etc.

E.O.Cooperative functions as ecosystem

5. Information, Documentation, Goods & Finance come together

- Chain End Users provide + secure product offset
- CapitalPartners provide + secure finance
- ImpactPartners provide + secure information, documentation & transactionflows
- ProjectPartners + AdoptionPartners + CapitalPartners secure flow of goods and finance
- Within the ecosystem, the 'interest tool' becomes obsolete as it would form a 'cost' to all partners.

EOM controls what no bank can: goods, information, documentation, finance always within ecosystem

Some of the advantages of the Equal Opportunity Model Provides for a truly sustainable organisation form:

- Connects via common-interest and partnership
- Turns clients into effective partners
- Reckons with all cost-increasing parties
- Turns value-chains into 'value-entities'
- Each partner can remain with his core-activities
- Provides <u>all</u> partners with stability, financial surety, flexibility, supply-chain control, additional profits

Long term perspective for ALL involved Fair - Sustainable

Question is not whether the model works: it's how it should work

- EOM creates value-adds that cannot exist in our current economic model
- First projects started in 2014, first results available in 2015
- We talk with government, pension funds, agricultural organisations, universities, ngo's, banks, etc both in Netherlands and abroad:
- COMMON INTEREST is your interest as well

First projects validate the EOM, functionality and value-adds

more perspective

EQUAL OPPOR TUNITY MODEL
