

Four Tech Billionaires Declare War on the U.S. Dollar

***Due to the sensitive nature of this story, our legal team advised us to blur these billionaires faces. When you see what they're up to, you'll understand why...**

Dear Reader,

A major tech shakeup is underway...

For hundreds of years, governments have kept tight control over our cash.

But soon, their money monopoly could grind to a halt.

This is a fast-moving story...

And not all the facts are in.

But here's what we know for certain:

Tech billionaire, Mark Zuckerberg, is plotting a move so big, it's hard to believe.

The New York Times reports:

Let me say that again...

Mark Zuckerberg is planning to launch a new technology.

A separate, competing financial system!

And he's not alone.

As you'll see, Amazon is close on his heels.

Google is readying its own currency.

And according to the Securities & Exchange Commission, Apple is getting in on the act, as well.

If all goes as planned...

These actions could soon trigger a massive change to money, as we know it...

And forever alter how we spend... save... and invest – practically overnight.

In response, Fidelity has rolled out a whole new division to help its wealthy clients prepare.

TD Ameritrade has called the pace of this development "amazing."

And Goldman Sachs admits it will "redefine the way we transact [and] if that sounds incredibly far-reaching, that's because it is."

Now there's a reason why this is happening, which very few understand.

The current financial system has favored the rich and connected and allowed them to build tremendous wealth – while at the same time, shutting out tens of millions of hard-working Americans.

But today, radical changes are on the horizon. Changes that could tilt the balance of power away from Wall Street and Washington, and kick off a new wave of financial innovation and disruption unlike anything we've seen before.

And for investors, it adds up to an opportunity to generate immeasurable wealth in a short period of time.

More on that in a moment.

First, I'm sure you're wondering who I am and why I'd make such a claim...

In 3 Decades, I've NEVER Seen Anything Like This

My name is Jeff Brown.

Just recently I was invited back to Washington, D.C., where I play an active role in the Chamber of Digital Commerce.

It's the world's top trade association for "digital assets" – which includes entirely new currencies – like Facebook's Libra.

And its members include executives and insiders from dozens of top tech firms, from Accenture to Microsoft and Bitpay to Wells Fargo.

Prior to that, I spent the last 26 years working with some of the most advanced tech companies in the world.

In fact, as an executive at NXP Semiconductors and Qualcomm... my team and I helped develop the tech behind the first self-driving cars.

During my tenure, Qualcomm's stock more than doubled... and NXP's stock grew as much as 761%.

Since leaving the corporate world, I've taken stakes in dozens of tiny firms, including:

- Intabio, which is up 900%.
- Infospace, which went up 743%.
- Or Anadarko, which went up 4,300%.

All told, I've made over 100 early-stage investments – with a success rate of 93%...

And I've been able to live a kind of life most people can only imagine.

Today, I have the good fortune to live in the richest community in America...

I've spent the last year as a student at Yale, as part of an intensive business leadership program. Participants were hand-picked from the elite of the business world.

And I've been able to play a role in continuing, private discussions – all about the future of money.

Which brings me back to the story I have to share with you today.

I just returned from a private meeting, with some of the top lawmakers in the U.S. We gathered in the Congressional Auditorium, which sits beneath Capitol Hill. It is a highly secured space often used for national security briefings.

That's me in the second row...

I also met with members of the Senate Financial Services Committee.

So I can tell you, first-hand – plenty of folks in Washington see digital currencies as a threat.

You might think the government will clamp down and prevent these alternative currencies from taking flight.

But the truth is, their hands are tied.

Even the Senate Banking Committee leader – Patrick McHenry (R-N.C.) – admits he can't stop its spread.

He says, "There is no capacity to kill [these new currencies]."

Which is why there's a silent scramble going on in Washington.

But as I'll show you – there's nothing to be afraid of.

To the contrary, this is something to celebrate.

Because if you understand what's happening – you could make a fortune in the weeks ahead.

As we speak, a new, competing financial system is taking root. And the technology behind it will change the world in ways you can't imagine.

That said, I'm sure you're wondering...

How could a private company – even one the size of Facebook – take on the world's top banks and governments... and win?

If you asked me if this was possible five years ago – I would have said, "Not a chance."

And yet that's precisely what is happening...

An epic showdown has broken out between the government and some of America's top tech firms.

All because of a new and controversial plan to launch their own competing currencies... which could restructure the financial system overnight.

The Financial Fireworks Have Only Just Begun

Recently, two of America's top tech firms were **threatened** by three different sources within the Federal Government.

In front of Congress, Senator Mark Warner told Facebook, "[We are] going to have to take action here. The era of Wild West in social media is coming to an end."

On the heels of that warning...

The Justice Department accused them of “stifling the free exchange of ideas.”

The FCC targeted Google and Facebook, saying it was time for these firms to have government oversight.

And on September 9th CNBC announced Google is now facing a new antitrust probe by 50 attorneys general. (Nearly every state government!)

Why is this happening... and why now?

A lot of folks think these companies have grown “too big for their britches.”

Others say it has something to do with the upcoming presidential election.

For good reason. According to *USA Today*, Facebook routinely “rigs” its social media feeds to favor Democrats.

But this firm has been big and influential for years.

The question is...

Why has the government waited until this moment to fight back?

As you’ll see...

Facebook has drawn the wrath of the government by threatening to do the unthinkable:

Mint its own money!

Not only that – it got dozens of the top financial tech firms in the world to sign on to support its roll-out.

That’s why I’ve raced to record this presentation, to share what I’ve learned.

Mark my words, I think you’ll be shocked when you see what this could mean for your savings and investments, in the weeks ahead.

And when you see how much money is at stake, chances are, you're going to do what I've done...

Place a calculated bet... break out the popcorn... then sit back and enjoy the "show!"

Leapfrogging, Gold, Silver and even Bitcoin

You don't need a PhD to "get" why this is such a huge development.

Just take a look at this chart...

It tells a simple story:

As you can see...

The title of "world's top currency" has shifted from one country to another – over a period of hundreds of years.

From the days of the seafaring Portuguese and Spanish Empires... through more recent history – when the center of the financial world shifted to France... then Great Britain and finally the U.S.A.

Whoever controls the world's top currency holds a key advantage – the ability to print or borrow money in massive quantities.

In 1720, it was the French – under Louis XIV.

In 1815, it shifted to Great Britain – and the pound sterling.

And since 1944, the world's top currency has been our U.S. dollar.

But history shows its reign won't last forever.

In fact, my research indicates the dollar's role as "top currency" could soon face a new threat, unlike any we've seen before.

For years, a debate has been raging.

Some, like Congressman Ron Paul, have called for a new gold standard.

The Economist magazine has predicted a one-world currency.

While others have claimed Bitcoin, will rule supreme.

So far – none of these predictions have come true.

And little has changed about the way we get paid... save for retirement... or spend our money.

But today, we are closer to a point of transition than any time in history.

Behind the scenes, a battle is raging between old world banks... the government and a new financial cartel – led by the top tech minds on the planet.

You know their names...

Cook... Bezos... Zuckerberg... Page and Brin.

And you know their businesses...

Apple... Amazon... Facebook... Google.

But most folks have no idea what they're *really* up to:

Each of these firms is on the brink of launching their own private currency.

In other words – a form of money, not backed by gold... or silver... or any government.

Facebook alone has lined up an impressive roster of supporting partners... ranging from Uber to Coinbase to Spotify.

Its head of this special project, David Marcus, has gone on record saying:

// It feels like it is time for a better system. This is something that could be a profound change for the entire world."

And the transition is moving so fast...

Governments from Paris to Washington D.C. are scrambling to adapt.

Federal Reserve Chairman, Jerome Powell, was one of the first to react... saying this type of new currency raises "many serious concerns" including potential risks to the stability of the financial system.

The International Monetary Fund's Chief Economist, Gita Gopinath also warned:

And Treasury Secretary, Steven Mnuchin recently said:

It's no wonder they're upset...

Because unlike Bitcoin or even gold and silver – which pose no immediate threat – **these new currencies are controlled by some of the most powerful names in the tech world.** With millions... in some cases billions of members and customers.

With the flip of a switch, any one of them could serve as a new global currency, right alongside the U.S. dollar.

What do you think will happen when up to 2.3 BILLION people now have access to a currency that's NOT the US dollar?

Well for those who are caught unaware, the result could be devastating...

But if you understand how to profit from this shift – you'll have nothing to fear. And everything to gain!

The political stakes are high, as well...

For good reason: The tech billionaire who controls this new form of money will soon become the most powerful man on the planet.

More powerful than any central bank official.

More powerful than President Trump... or Xi Jinping... or Fed Chairman Jerome Powell.

Imagine if the "Leader of the Free World" was one of these guys:

Believe me, I don't make this prediction lightly and I have no interest in trying to scare you.

I'm simply presenting the facts.

You might disagree with my findings.

But consider...

As far back as 2014, *Forbes* warned **"Apple has twice as much cash as the U.S. government."**

Today its stockpile has grown by an astounding 53%.

According to Statista, Facebook has 2.4 BILLION active users...

And 90% of them live *outside* the U.S.

In other words – even if the Feds shut down all American accounts – it would only shrink Mark Zuckerberg’s empire by 10%!

And then there’s Amazon...

Dozens of government outfits – from the Department of Homeland Security – to the Smithsonian museum all depend on its platform to operate.

So you tell me – who has more leverage – Big Tech or Big Government?

Until recently, the answer was the latter.

But with each passing month, it’s getting harder to tell the difference.

In fact, a recent *Forbes* ranking of the 10 most powerful people in the world included not one but THREE tech leaders – Jeff Bezos, Bill Gates and Larry Page.

#1 Xi Jinping	China	66
#2 Vladimir Putin	Russia	67
#3 Donald Trump	United States	73
#4 Angela Merkel	Germany	65
#5 Jeff Bezos	Amazon.com	55
#6 Pope Francis	Roman Catholic Church	82
#7 Bill Gates	Bill & Melinda Gates Foundation	64
#8 Mohammed bin Salman Al Saud	Saudi Arabia	34
#9 Narendra Modi	India	69
#10 Larry Page	Alphabet	46
#11 Jerome H. Powell	United States	66

This radical shift of power of no longer a “prediction,” it’s already happening.

And it’s setting up **a profit opportunity unlike any we’ve seen in 300 YEARS!**

Yes, believe it or not, this has happened before.

The Last Time “Big Tech” Took Over “Big Government”

Back in the 1600s, one firm – much like Facebook and Google – grew so powerful, it rivaled the size of its own government.

I’m talking about the Dutch East India Company.

By 1669, it was the richest corporation in the world...

It even secured the right to mint its own money – the Dutch “guilder” (below) – which reigned for a period of 80 years as the world’s “Top Currency.”

For investors who saw what was happening and took action – its rise led to an incredible windfall.

The Dutch East India company’s annual dividend *aloned*would have been enough to make you rich. 40% per year!

That kind of income is enough to **turn a single \$10,000 stake into \$289,000** over the course of a decade. Not counting ANY gains from the stock price moving higher!

Now, for the first time in centuries, it’s happening again. A private company could soon take on the title of world’s “top currency” – and this time, the upside is exponentially BIGGER.

You’ve probably heard about Facebook’s new currency, Libra.

Or Google’s rush to release “Google Coin.”

This is only the beginning...

According to the Winklevoss twins – who famously made a fortune on the rise of Facebook... and again on the rise of Bitcoin:

In a moment, I'll show you where I'm moving a portion of my money right now.

There's no need to panic – but at a time like this, it makes sense to move some cash out of the banking system... and out of the dollar, entirely.

But let me make one thing clear...

Whether one of these new coins emerges as king – or none of them – it doesn't matter.

You heard that right...

No matter who wins this battle: Big Tech or Big Government...

It will trigger a once in a lifetime opportunity for investors who are paying attention.

Ever since Facebook announced its Libra currency, the mainstream press has been silent...

And truth be told, the only reason it popped on my radar is because of my high-level Silicon Valley connections...

Connections I've forged over two decades of working with the nation's top entrepreneurs and visionaries.

You see, whenever a new, radical tech breakthrough appears on the horizon...

... No matter how "secret"...

I'm one of the few guys who hear about it first.

- I was one of the first to learn about self-driving cars... inspecting one at NASA's famed Ames Research facility way back in 2011. The semiconductor play I recommended after that visit, Nvidia, was the best performing stock on the market in 2016, going up over 700% since then.
- I was one of the first people to hear about gene-editing therapies, months before they made headlines in Financial Times, The Wall Street Journal and Wired Magazine. The small company I recommended went up 302.6% in 16 months.

- › And, I was invested in cryptocurrencies long before most people even heard of Bitcoin. I recommended bitcoin back in 2015 at \$248. It rose more than 7000%.

But in the weeks ahead, as global tech giants launch their new currencies...

It will have a far larger impact than any of those innovations combined.

Ultimately, it could knock Bitcoin off its perch as the top alternative currency in the world.

On a more serious note, it could threaten established paper currencies like the dollar... prompting the government to fight back... or partner up.

And if history is a guide... it could happen in a matter of weeks – with very little warning.

Facebook's classic motto – after all – is "Move fast and break things."

But please – whatever you do...

Don't follow the headlines...

Don't load up on Google... Apple or Amazon stock. Or any of the new "coins" they issue, for that matter.

The key to making a fortune from this massive shift is understanding the system behind it.

We are Just Weeks Away from a Total Reset... And When it Starts, There's No Turning Back

It's easy to see why Big Tech is eager to launch their own currencies.

There are huge profits to be made in disrupting the world of money.

As you know, the big credit card companies have a hammerlock on how we spend money. And investors in these firms have made a fortune!

- › Discover Financial shares are up as high as 1,502%...
- › VISA has jumped 1,024%...
- › MasterCard surged an incredible 6,389 %...

Similarly, companies supplying the tech for credit cards to work, have seen their share prices skyrocket, too...

For example, NXP Semiconductors climbed as high as 1000%...

And IBM, the inventor of magnetic stripe verifications for credit cards, jumped as much as 1,898% ...

But now, for the first time ever, they're in the crosshairs of a new and disruptive technology. And I'd argue they're being forced to partner with Facebook... and soon, Apple... Amazon... and Google.

It's the same story with the big banks.

For more than a century, lending and investing have been dominated by Wall Street.

It's a multi-trillion-dollar business.

But today, a new financial system is emerging. Which is why firms from UBS to Bank of New York Mellon to HSBC and are scrambling to latch on.

According to Reuters, "The world's largest banks are in the process of investing around \$50 million" to make sure they don't get left behind.

You may have noticed, Facebook unveiled their new coin, called "Libra," at the historic San Francisco Mint – a 150-year-old building which according to the NY Times, once held one-third of the United States' gold reserves.

This was *not* an accident.

Nothing is an accident in matters like this where trillions of dollars are at stake.

And the symbolism here is impossible to ignore Zuckerberg wants to rule the financial world.

You might think it unlikely...

But consider: Mark Zuckerberg's personal hero is a Roman Emperor named Caesar Augustus.

In his own words...

"Through a really harsh approach, [he] established two hundred years of world peace."

What he forgot to mention was...

Caesar Augustus took supreme command of every facet of Rome's economy – for life.

Could Zuckerberg be planning a similar takeover, starting with the financial system?

It may sound like a long shot. But I wouldn't bet against it.

In addition to confronting the Feds – he's tapped an independent non-profit group to run his new currency project from Switzerland – a historic asset haven for wealthy investors seeking shelter from the U.S. government.

Whatever twists and turns this story takes – one thing is clear:

A new financial system is taking shape...

Driven in large part by Facebook... Google... Amazon and other tech companies.

And while it's impossible to say which of these tech firms will emerge on top... there's a much, much better way to play this shift – with much greater upside than Amazon, Google or Facebook shares.

And it will soon trigger a huge shift in the financial system – and a potential windfall for investors who take action now.

In fact, even if the government wins the battle – this one specific investment is set to soar.

Just the other week – we learned the National Security Agency (NSA) has quietly switched its focus from monitoring alternative currency trading to launching its own cryptocurrency – which some have dubbed the “FedCoin.”

It's too early to tell exactly what they're up to...

But no matter who comes out on top – Big Tech or Big Government – the financial system as we know it is going to change in a big, big way.

I expect to see major fireworks in the weeks ahead...

Which is why it's critical you take action now.

If you sit back and do nothing at a time like this... you may regret it for the rest of your life.

The Economist calls this “the next big thing” and *Fortune* says it will “change the world.”

Marc Andreessen, inventor of the world's first web browser, even went so far to say it's “the most important [innovation] since the internet itself.”

What's the best way to profit from this mega-trend?

You see – all these new competing currencies – including one being raced to completion by the U.S. Government – have one thing in common.

I'm talking about blockchain technology.

You've probably heard about blockchain technology quite a bit over the past few years.

And if you're like most people – it might seem hard to understand.

But it's quite simple.

Blockchain technology is the foundation of all cryptocurrencies. It's the reason why they work, and the reason why they are decentralized and secure.

The key to this technology is – it makes it possible for anyone to create new currencies free and clear of the government.

Which is exactly what companies like Facebook, Google, Amazon and Apple are doing now.

And its potential reach goes way beyond finance.

Blockchain tech is *already* beginning to disrupt dozens of old-world businesses and practices:

From banking... to real estate... to cyber-security and healthcare... to the way investors take an early stake in start-up companies.

That's why 90% of the top decision makers at tech companies across America are working on a digital transformation...

And why Statista predicts global blockchain spending will account for \$12.4 billion by 2022 — which is a 360% increase from 2019.

In recent months... the floodgates have opened:

- IBM partnered with Maersk, the cargo giant. The joint venture is testing blockchain technology for the global shipping industry... which transports more than \$4 trillion in products a year.
- JPMorgan and Goldman Sachs are using blockchain to track \$2.8 trillion worth of securities.
- MasterCard uses blockchain in its global payment network. (That's \$1.35 trillion in transactions per year.) And Visa is doing the same. In fact, credit card companies and big banks are aggressively hiring blockchain engineers.
- Even cross border money transfer company MoneyGram has decided to use blockchain technology for its entire global money transfer business.

It all adds up to one of the greatest profit opportunities of the 21st century.

Bigger than the DotCom boom...

Bigger than Bitcoin...

Bigger than the marijuana boom we've seen in recent years — *combined*.

And investors who realize what's happening — and take action today could make a fortune.

To repeat:

The technology that underpins our financial system, is about to change, profoundly.

A new wave of currencies — backed by corporations like Facebook, Google, Amazon and Apple will soon emerge.

Any one of which could compete with or circulate right alongside the dollar.

But you don't need to worry about Facebook's Libra... Google Coin or Amazon Coin to profit.

Instead, I've identified three "backdoor" ways to play this massive shift with far more upside.

This could be your last chance to get in and set yourself up for a windfall — before it's too late.

In just a minute, I'm going to show you three ways to CLEAN UP as this explosive trend gathers steam and blockchain technology takes over.

And look, I'm not talking about 10 or 20 years down the line.

You're going to see radical changes take place in the months ahead...

In fact, it's already happening...

Have you recently bought any chicken, milk, or mangoes at Walmart? If you did, congratulations. You've been using blockchain without even realizing it.

You see, Walmart invested \$25 million into this technology to build a faster, cheaper, and safer way to track its grocery sales.

Right now, it has over 1 million items on the blockchain. Yes, including chicken, mangoes, pork, berries... and much more.

Now, imagine if there's something wrong with the food you buy...

With blockchain, Walmart can trace its origin and remove it from shelves in a matter of seconds... instead of weeks.

Want another example? Airlines and airports.

Turns out, one of the biggest pain points in air travel is having conflicting flight information at gates, on airport monitors, and airline websites...

Switching to blockchain makes it a breeze for airports to maintain correct flight data at all times.

British Airways, along with Heathrow airport, Geneva Airport, and Miami International Airport have recently finished testing such a system called FlightChain... with more airlines and airports to follow.

And this trend is only getting started...

"We're seeing assets start to become digitized," says Jay Biancamano, State Street's head of digital assets and blockchain in capital markets.

"Trickle, trickle, trickle – and then we believe there will be a flood."

A flood of money that could make early investors rich beyond their wildest dreams.

What I've shown you today is merely the beginning...

- Colorado Senate Bill 086 suggests using blockchain technology to secure private data from cyber attacks and reduce paper records...
- A company called Everledger is revolutionizing the \$13 billion-a-year diamond industry by creating a blockchain-based registry of every certified diamond in the world. (2.2 million diamonds are already in the registry.)
- Dubai plans to be the first blockchain-powered government by the end of 2020. The city is currently rolling out 20 blockchain applications for road and transport, energy, health, and education.

And would you believe me when I say that nobody is more excited about blockchain technology than the big banks on Wall Street? JP Morgan, Goldman Sachs, Citigroup... basically all of them.

While they might not have high opinions of cryptocurrencies... (JP Morgan's CEO, James Dimon, went as far as trashing bitcoin as a fraud)...

...They're all in love with the technology that runs it: Blockchain.

And they should be. Because thanks to this breakthrough technology, they're looking to save billions upon billions of dollars in transaction costs.

You see, the way it works now... banks have to set aside a big chunk of capital while they wait for transactions to settle. (That's in case the settlement fails.)

The problem is, this waiting can take days or even weeks. Which means all of that capital is just sitting there, doing nothing. No good.

Switching to blockchain shrinks those trading times from weeks down to minutes... and, more importantly... it frees up billions of dollars for the banks to use immediately.

But we're still only scratching the surface...

There are so many more use cases... and new companies adopting blockchain every day... it's incredible. I'm telling you, the whole market is ready to explode.

And you know what else?

When Facebook... Amazon and Google make their next announcement, blockchain stocks will shoot into orbit, and they won't be coming back down any time soon.

And the gains could be tremendous...

I wouldn't be surprised to see 5-to-1... 10-to-1... and in a few rare cases, 50-to-1 upside, over time.

But only if you make the right moves, right away.

My advice to you is...

Don't Just Own Bitcoin!

Or Ethereum... or Ripple... for that matter.

It's true, these cryptocurrencies made investors a fortune.

A single \$500 invested in them in 2016 – grew to be worth \$989,969.92 at the peak.

And they still have huge potential.

But the real game changer is the technology behind them...

It's blockchain technology...

So, if you missed out on the furious rise in cryptocurrencies – you're in luck. Because now you have a second chance to make a fortune on a few blockchain stocks.

I've identified three essential blockchain stocks that are flying under the radar.

But they won't be for long...

Over 100 million Amazon Prime members are ready to start using Amazon Coin right away.

Billions of Facebook members around the world will be able to transact in Facebook's coin, Libra – which is not backed by any single government.

And countless more will soon be exposed to private currencies from Apple to Google and beyond.

It all adds up to a potential market more than 30-times bigger than Bitcoin!

And you could be sitting pretty – no matter which one of these new currencies comes out on top.

But if you wait much longer... you could miss out and never see another opportunity like this again.

For that reason, I've put this valuable information inside a comprehensive report that I call...

"The Private Money Revolution: Three Simple Ways to Profit from the Next Big Currency Shift."

I want to rush this report to you free of charge today. You see, Amazon, Facebook and Google could announce their next crypto move any day...And when they do, these blockchain stocks are going to move up – quickly. So you want to get in position to profit right away.

How much money could you make with these three blockchain stocks?

The amount of money at stake will shock you...

...because it feels like we're in the Internet boom on steroids.

To give you an idea...

If you invested \$1,000 in Amazon when it went public, 22 years ago, it would now be worth over \$1.2 million.

While a \$1,000 investment in Bitcoin at its inception would today be worth over \$171 million.

Just imagine what will happen when you combine a powerful tech leader like Facebook... Google... or Amazon and the technology behind the world's #1 cryptocurrency.

We've never seen anything quite like it...

That's why what we're looking at today is so much bigger...

Blockchain has the potential to disrupt just about every major industry...

From Banking: \$134 trillion

To Real Estate: \$217 trillion...

To Insurance: \$4.5 trillion...

To Healthcare: \$8.7 trillion...

Altogether, more than \$300 trillion in different segments of the market will be forever changed.

And for investors who make the right moves today, it could lead to a once-in-a-lifetime chance to build extraordinary wealth... in an extraordinarily SHORT period of time.

That's why I created a comprehensive report, packed with the essential information you need to profit from this situation. It's called "**The Private Money Revolution: Three Simple Ways to Profit from the Next Big Currency Shift.**"

I've used my decades of experience to pick apart everything about these companies.

I've pored through their balance sheets.

I've met with the executive staff in many cases.

I've visited suppliers and done my own research on future earnings.

Basically, I vet these companies the same rigorous way I would when I make an investment in a tech startup.

And I've made money on 93% of the companies I put money into.

All to bring you the most up-to-date research you could possibly find on blockchain technology... *and how to profit from* the new private currencies set to launch in the weeks ahead.

The amount of money at stake – it's breathtaking.

That's why I'd like to send you my exclusive research absolutely FREE.

I'll tell you how to claim your copy in a moment. But first...

I want to be clear.

While I do believe blockchain stocks are one of the best places to put your money...

It's not the only way to profit from this situation

There are still huge gains to be made on select cryptocurrencies...

This wave of new private currencies – from Facebook's Libra to Google Coin and Amazon Coin – will bring new attention to cryptos... and cause millions of new investors to pile in.

It will cause some coins to surge far more than Bitcoin.

But if you're going to speculate in this corner of the market... you have to know what you're doing.

If you've never done this before, it can seem a bit complex, difficult, somewhat risky...

However, I've found a low-risk alternative that is so easy to set up... you could be up and running in minutes!

You don't have to create a wallet, and you don't have to buy coins yourself. You don't even have to use a computer if you don't want to.

The best part? It works just like an IRA. You get all the tax benefits that come with it...

But there's one huge difference: The gains from this special type of IRA can be astronomical.

It's what I call...

The World's Most Safe and Trusted Crypto IRA Account

This is a perfectly legal investment tool, approved by the IRS. It's a real IRA with all the tax advantages. But instead of stocks or bonds, this IRA holds cryptos.

It's the best way to grow your retirement nest egg... and potentially become substantially richer during this next big crypto boom – which is now underway.

The best part is...

- You don't need to set up a wallet or remember complicated passwords.
- You don't need any technical know-how to use the Cryptocurrency IRA for profit.
- You don't even need to own a computer.

You can get all the benefit of owning cryptos – without the hassle.

In fact, it only takes one phone call to set it up.

To give you an idea...

A modest sum of \$20,000 put into this special IRA account less than three years ago would have grown into \$334,850 of tax-free money...

That's a 1,574% gain – with virtually no stress on your part.

That's because, this special IRA account offers the best of both worlds. You get the upside of potentially explosive gains from cryptos, and the peace of mind knowing that your money grows tax-free...

You're unlikely to hear about it anywhere else...

But if you're interested – it's important you take action sooner than later.

This is one of those rare moments in investing where you can have your cake and eat it too.

Look, despite the volatility we've seen in the crypto market...

Cryptocurrencies still have massive upside potential. Even bigger than what we've seen so far.

It remains the only asset class in the world where just a small amount invested... \$1,000 – even \$500 – could pile up into a multi-million-dollar fortune.

Which brings me to another opportunity I'm excited to share with you...

There are three coins that I recommend every investor should have in their special IRA basket...

But if you're going to make a move, you'd better hurry...

According to Brian Armstrong, co-founder and CEO of Coinbase,

But now he says:

In other words, the floodgates are opening.

A massive amount of money is rushing into the crypto world.

So the sooner you can establish a position, the better!

I've gathered all the details about this special IRA account and the coins you should hold in two complimentary research reports "**Secrets Of The Cryptocurrency IRA**" and "**The Perfect Crypto Portfolio to Multiply Your Retirement Funds by More Than 1,000%**".

Inside, I'll walk you through everything you need to know to open your own cryptocurrency IRA... tell you exactly which coins to pick, and how much you should allocate to each of them...

Everything is laid out in simple terms, step by step... so you can set yourself up to turn a small amount of cash into a massive war chest for retirement.

Even better, this firm has offered to let my readers in at 25% discount!

I've met with the management team, inspected their process and found that it's the best way to line up massive crypto gains – inside a government-approved IRA.

And I want to point out, I don't receive any money if you sign up or use them. But that said, I highly suggest you take a closer look.

All you have to do is mention my name when you set up your Cryptocurrency IRA and you're ready to go.

You can get these three reports today free of charge...

... along with my other valuable investment report "**The Private Money Revolution: Three Simple Ways to Profit from the Next Big Currency Shift.**"

All without risking a penny.

This could be the most transformative opportunity we see again for many years to come.

That's why I'm inviting you to take a risk-free trial subscription to my monthly research letter, *The Near Future Report*.

Inside, you'll find real-time updates on all the plays I've mentioned so far... The three blockchain companies... The Cryptocurrency IRA... And each month, I'll share new insights into groundbreaking trends that can multiply your money.

From the new wave of 5G networks and artificial intelligence to precision medicine... and breakthroughs like the self-driving car.

Why do I focus so strongly on technology?

"If you can see three days into the future, you'll become rich"

A lot of regular investors avoid the tech sector.

It's hard for a layman to distinguish between technologies and predict which ones will be successful and which won't.

The conventional wisdom says you have to see 20 years into the future and then wait that long before you make a profit.

But the truth is, you don't have to wait to profit on cutting-edge technology.

If you get in right before the breakthroughs hit the market, you can make a fortune.

How do you do that?

Well, quite frankly, it helps to know someone like me that operates inside Silicon Valley's bubble.

Because I see and hear about breakthrough technologies months before they make headlines.

Now, to be clear when it comes to investing, nothing is guaranteed. So you should never invest money you can't afford to lose...

But if you time your investments properly, you can make a fortune quickly.

Like anyone who followed my Nvidia recommendation did – 330% in just a year.

But I find opportunities all over the world...

I spent a large chunk of my career living and working in Japan. I'm a practitioner of an ancient martial art, called Shotokan karate. It's one of the four traditional forms of karate, originally practiced in Okinawa.

It requires discipline and focus, concentration developed over years of experience.

In fact, when I found a teacher I knew could take me to the next level, I threw away my old training and started over again... right from the ground up. And within a year, I earned my first black-belt.

I also picked up an ancient Japanese proverb during my time there. And it's one that sums up my investment philosophy.

It's phonetically translated as "mikka saki shireba choujya."

Roughly in English, it means:

"If you can see three days into the future, you'll become rich."

In other words, you don't have to know what's going to happen miles down the road to get rich on tech stocks.

You only need to know what's coming right around the corner.

That's why I call my research service, *The Near Future Report*.

I'm not going to lecture you on technologies that are years away.

I'll show you how to make money on tech stocks right now.

From my position as an angel investor and advisor to Silicon Valley startups across multiple types of tech, I learn about rapid advances in technology long before the rest of the world.

And I can spot the signals of mass consumption on the horizon.

In *The Near Future Report*, I'll take you behind the curtain and show you technologies on the verge of immediate adoption, like self-driving cars.

You won't hear about these technologies ahead of time on TV or from your broker.

And to be blunt – most of the technology advice out there is garbage.

In *The Near Future Report*, you'll reap the rewards of my 26+ years of experience working on breakthrough technologies and advising tech executives in Silicon Valley and Japan.

I have a track record of success identifying stocks on the verge of a huge run-up.

Now, I'm going to share that research with you, in *The Near Future Report*.

If you accept my offer to become a subscriber today, you'll get these three valuable research reports right away, my compliments:

“The Private Money Revolution: Three Simple Ways to Profit from the Next Big Currency Shift.”

When Facebook, Amazon and Google make their next big coin announcement, the two stocks I tell you about in this report will positively skyrocket. Because like I mentioned, blockchain technology will be at the heart of this new revolution in private money.

Secrets Of The Cryptocurrency IRA.

Now that we're past the brutal sell-off known as “crypto winter,” cryptocurrencies are once again on the rise...

But until recently, it was difficult for regular folks to cash in. But not anymore! In this report, I'll tell you about a new and exciting way to get fast gains from cryptos without the risk and hassle that come with it. It's the best of both worlds: It's a regular, tax-deferred IRA account

with the special profit potential of cryptos.

In this special report, I show you everything you need to know to stash away your tax-free fortune with cryptocurrencies.

The Perfect Crypto Portfolio to Multiply Your Retirement Funds by More Than 1,000%.

It's crucial that you understand how to split your Cryptocurrency IRA allocation to properly grab the most profits in 2020 and beyond. That's why I've put together a winning combination of three cryptos and what percentage you should own of each. All inside this easy-to-follow guide.

But that's not all...

Every month I'll also send you a new issue of *The Near Future Report* with a new recommendation on how to make the most gains from the tech market.

And you'll also get:

- **Exclusive members-only email alerts.** With the buy and sell recommendations, stop losses, buy-up-to prices, and so on.
- **All the back issues of The Near Future Report.** Plus, my full archive of special reports, including *Self-Driving Cars: The Single Best Way to Profit This Year*, and *How to Get Rich on Tesla's Gigafactory – Without Buying Tesla*. And perhaps the most powerful new technology spreading across America today – 5G. I've put together a private report called *The Future of 5G Profits*. If you get in right before this breakthrough hits the market, you can make a fortune.
- **The Perfect Crypto Portfolio to Multiply Your Retirement Funds by More Than 1,000%.**
It's crucial that you understand how to split your Cryptocurrency IRA allocation to properly grab the most profits in 2020 and beyond. That's why I've put together a winning combination of three cryptos and what percentage you should own of each. All inside this easy-to-follow guide.
- **Full access to The Near Future Report portfolio.**

Best of all, I'll give you 60 days to try this service risk-free.

Take all the time you need, have a look around, and see what you think of it. You can even put a little money into my recommendations and test them out.

If, for any reason, you're not satisfied with The Near Future Report, you can cancel the service any time... and still keep all the reports you get today.

So, how much is all this going to cost you?

A lot less than you think...

And there's one more bonus I'd like to throw in as well.

How to Cash in on the coming 5G Revolution

Over the past year, I've been involved with an elite executive training program at Yale University.

And not long ago, I gave a talk to a private group – just off campus – about a transformative new technology called 5G.

Why is 5G such a big deal?

After all, we've had 3G, 4G – incremental improvements in the quality and speed of our internet.

5G isn't a small step like the others. It's a giant leap forward. It's more like the first time we ever used the Internet.

In other words, it's not "evolutionary," it's "revolutionary!"

And already... before many Americans have been able to use it – 5G stocks are already making investors rich.

Take the case of Powerstorm Holdings. Just on the anticipation of 5G speeds helping their network solutions business – shares went up 2,890%.

And Somerset Transition Corp's whole business plan relies on the increased speeds of 5G. Shares went up 4,900% in just seven months.

But that's just the beginning.

In the fall of 2020, Apple is set to roll out its first-ever 5G capable phone. It's going to be absolutely huge. And Samsung has recently released its own Android phone that's capable of 5G speeds.

But if you simply buy Apple and Samsung stock – you'll miss out on the biggest gains. Because as 5G networks continue to spread across the country – the shares of a few select companies are going to soar through the roof.

That's why I've put together another special report.

It's called: **Phase Two: The 5G Device Every American Will Need**. Inside, you'll discover my number one tech stock for 2020.

In addition to everything I've mentioned today, it's yours to enjoy, free.

Clients have offered to fly me across the world, first class and pay me tens of thousands of dollars for this kind of advice.

But through this special offer, you won't pay anywhere near as much...

You see, I created *The Near Future Report* to help everyday Americans make more sense of the stock market. And nothing makes my day like reading messages from my happy subscribers...

Like John J who wrote to say:

And Stanley P who wrote:

Your passion and knowledge of technology sector is quite obvious from your research. I really enjoy reading and learning from you about this sector and about your recommendations.

- Stanley P.

Or Jason V who said:

Just wanted to thank you for all your hard work and great newsletters... I find you have the best insight than any subscription I've had! Now I just focus on your recommendations and emails!

- Jason V.

Similarly, Steve T wrote:

I just wanted to let you know how much I appreciate "The Near Future" reports. I find Jeff's observations very interesting and his analysis very succinct ... as a subscriber from "down under" I rely on Jeff's intimate understanding of the US investing landscape... Well worth the subscription. Keep up the good work Jeff.

- Steve T.

... and Phil H commented:

Now, for \$199, you can get your hands on the most comprehensive tech investment advice for a full year.

And, as far as I'm concerned, when it comes to tech investment advice...

There's nothing like *The Near Future Report* out there at any price.

And I want to make sure you don't miss out on the opportunities I've shared with you today.

So, here's what I'd like to do:

Give my service a try today.

I'll give you 60 days to try it out, 100% risk-free.

In other words, if you change your mind... simply call our customer service team.

They'll give you a full refund, no problem.

Not only that – instead of the usual \$199 per year... I'll get you in at the heavily discounted price of just \$49 for a one-year subscription. That's a 75% savings off the regular annual rate. But only if I hear from you, right away.

Here's what you get when you subscribe today:

- 12 monthly *The Near Future Report* letters with all the back issues included.
- Exclusive members-only email alerts.
- Bonus #1: Special report **The Private Money Revolution: Three Simple Ways to Profit from the Next Big Currency Shift.**
- Bonus #2: Special report **Secrets of The Cryptocurrency IRA.**
- Bonus #3: Special report **The Perfect Crypto Portfolio to Multiply Your Retirement Funds by More Than 1,000%.**
- Bonus #4: Special report **Phase Two: The 5G Device Every American Will Need.**

Look, Amazon, Facebook and Google could announce their next cryptocurrency move any day...

It could happen tomorrow, it could happen next week... or it could happen in the next three months. But my research indicates it *WILL happen in 2020.*

And when it does, the three blockchain stocks I've found are set to shoot through the roof.

I urge you, whatever you do, please don't let this opportunity pass you by.

Take advantage of my 60-day risk-free offer. Take a look at my recommendations, right now. And then, decide for yourself if this is something you want to get into or not.

But please don't delay. There isn't much time to waste...

If you wait too long, you could miss out on one of the biggest tech stories of the decade. It could be years before we see another opportunity like this.

Click the button below and sign up for *The Near Future Report* today.

Sincerely,

Jeff Brown
Editor, The Near Future Report
October 2019

P.S. Four tech billionaires are in a heated race to launch their very own currencies – to compete directly with the U.S. dollar. It's setting up an epic showdown between Big Tech and Big Government. But no matter which group comes out on top, investors could reap a fortune. For the full details, make sure to get a free copy of my update – yours with a risk-free subscription to the *Near Future Report*.
