

We CARE about business transparency

### Discover the iPoint Suite

## We live in a world of limited resources ...

In today's dynamic environment, market requirements and products grow more complex and fast-paced. Supply chains become increasingly intertwined and global, and sustainability is becoming noticeably more crucial and a game changer for many business models. Regulatory requirements for and within companies are evolving at a fast pace, too. At the same time, product development and innovation continue to progress and add further challenges. All of this results in a multitude of requirements regarding CSR, ESG, substances of high concern or social compliance in supply chains. Within one company, these topics are often dealt with in various units utilizing a number of different tools. In other words, this often leads to a multiplication of efforts, data and knowledge silos. Such disjointed efforts alongside secluded data and knowledge can lead to a great lack of transparency and make sound decisions and ressource allocation even harder.

# ... but unlimited ideas for new products

That's why we have a mission: by combining expert knowledge and the possibilities of digitalization, we make this complexity manageable and create the business transparency required – the foundation for good decision-making and any management of compliance, risk, governance or sustainability topics. This is how we enable companies to successfully market their products worldwide – now and in future.

#### **We CARE**

iPoint has the ambition to be the best when it comes to digitizing the lifecycles of products. This has become a prerequisite to answer the three most important questions:

Do you know what's in your product?

Do you know your suppliers?

Do you know your direct and indirect impact?

That way, we enable organizations to collect, analyze, and report all data necessary to evolve viable strategies to manage the growing complexity and increase their relevant business transparency. We call it the CARE principle, and it is the foundation of all our products.

Good decisions require business transparency – and we help you achieve it. Because we CARE.

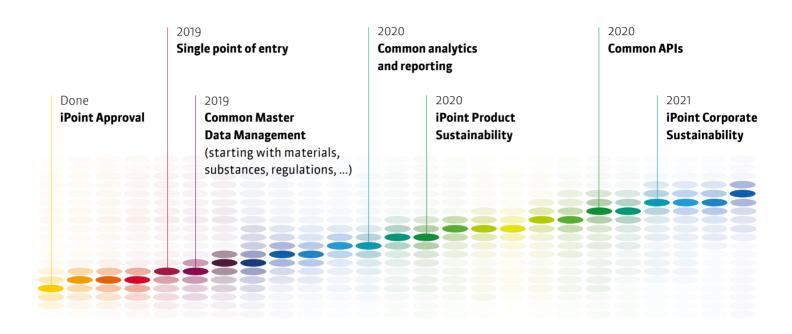

## That's why we are building the iPoint Suite
